Cyber PSYCHOSIS

SECTOR 9 · ONE HEIST · NO GHOSTS

GAME MANUAL

RULES · STRATEGY · OPERATION

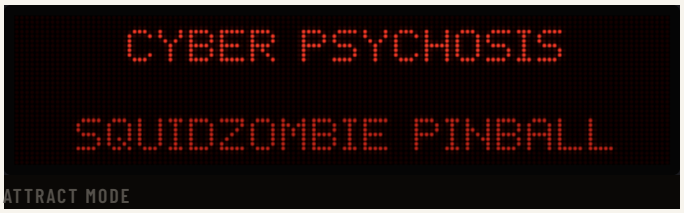

SOFTWARE VERSION 20 · OCTOBER 2026

CONTENTS

1 WELCOME TO SECTOR 9	The heist, the table and your first game	3
2 THE PLAYFIELD	Every shot, target and toy, numbered	4
3 THE SHOTS	The major shots and where they send the ball	5
4 FEATURES	B-R-E-A-C-H, cameras, R-A-G-E, the Reactor, the Vault and more	6
5 THE HEIST	The map, its keys and the five jobs	9
6 MULTIBALL AND BLACKOUT	Impound, Vault, Payload and the wizard mode	12
7 THE BLACK MARKET	Cash and what it buys	13
8 SCORING	What everything is worth	14
9 THE DISPLAY	Reading the dot-matrix display	15
10 STRATEGY	Measured shot odds, flow and the danger zones	16
11 APRON CARDS	The instruction card and the score card	17
12 OPERATOR'S SECTION	Settings, switches, lamps and diagnostics	18

AT A GLANCE

Balls per game	3
Ball save at the start of each ball	12 s
Jobs (no clock)	5
Timed modes	RAGE, 20 s
Multiballs	4
Most balls in play	4
Wizard mode	Blackout
Flippers	2 + 2 upper
Pop bumpers	3
Ramps	2
Display	128 × 32 dots

ATTRACT MODE

THE WIZARD MODE

HOW TO USE THIS MANUAL

Sections 1 to 3 get you playing. Section 4 explains every feature and section 5 the heist, the table's main story. The measured shot odds in section 10 come from the game's own physics: thousands of simulated flips off each flipper, with the share of flip timings that make each shot. Section 11 has the two cards that sit on the apron of a real cabinet. Operators and the curious will find the switch and lamp lists in section 12.

1 WELCOME TO SECTOR 9

Under a brutalist concrete tower sits a corporate vault, a security net of cameras, and a reactor that keeps the lights on. Your crew has one night. Break in, work through the heist one job at a time, and finish by overloading the reactor for a total **Blackout**.

THE TABLE

Cyber Psychosis is a widebody-style table drawn in ink on cracked concrete: heavy riveted steel, hazard stripes, and red glass lights. It plays in a phone's browser, tilted away from you like a real cabinet, with the dot-matrix display above the playfield.

The playfield has two main flippers, a small upper playfield (**The Vault**) with its own pair of flippers, two ramps, an orbit, a scoop, a captive-ball reactor, three pop bumpers and a three-ball lock.

CONTROLS

ACTION	TOUCH	KEYBOARD
Left flippers	Left half of the screen	Z, ←, left Shift
Right flippers	Right half of the screen	/, →, right Shift
Plunger	Hold the right half, release	Hold Space, ↓ or Enter, release
Start	Tap	Enter
Nudge	Shake the phone	X
Sound	Speaker button	M
Pause	—	P
Game speed	% button	—
Flat or tilted view	Add ?flat to the address	V

Each flipper button works both flippers on its side: the main flipper and the upper flipper in the Vault.

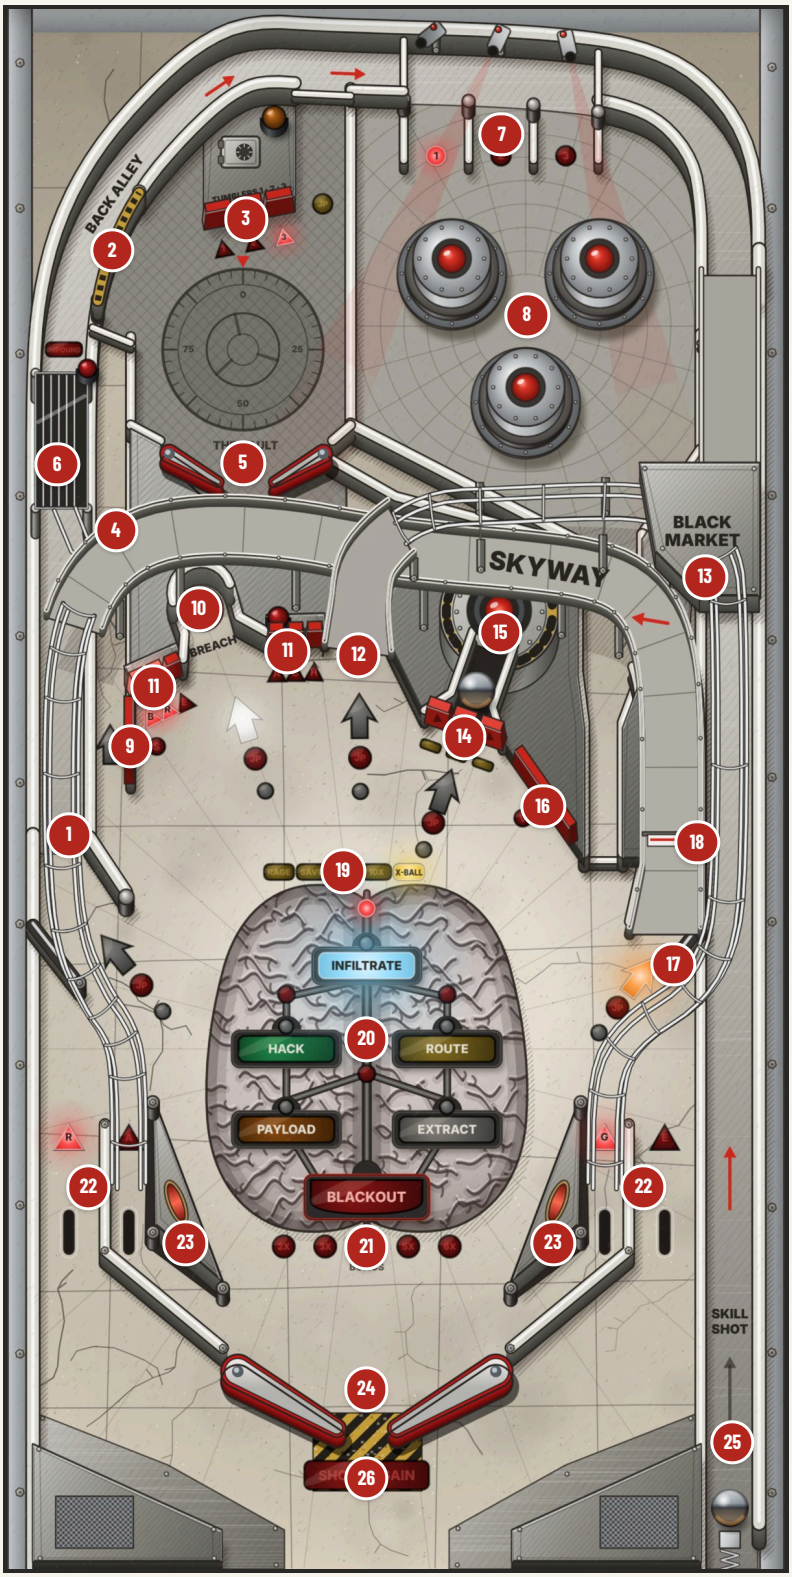

YOUR FIRST GAME

1. **Plunge.** Hold and release. The ball rolls into the three CAM lanes at the top and drops into the pop bumpers. A 12-second ball save starts with the plunge.
2. **Break in.** Hit the six red standup targets beside the glowing scoop, the **Breach**, to spell **B-R-E-A-C-H**. The display says **BROKEN IN** and the first job, **Infiltrate**, lights.
3. **Start the job.** Shoot the Breach. The ball is held while the display explains the job, then kicked out to the left flipper.
4. **Shoot the lit shots.** Each job lights its own shots in its own colour. Jobs have no clock: a job lasts until you finish it, and it carries on with your next ball if you drain.
5. **Find the next key.** Each row of the heist map is lit by a different key (section 5). Finish all the rows and the Reactor lights for **Blackout**.

FIVE THINGS WORTH KNOWING

- The flipper buttons move the lit **R-A-G-E** and **CAM** lanes, like a real lane change.
- Finish R-A-G-E on an outlane and that ball is saved.
- Everything earns cash. Make the Black Market ramp to buy the item on its menu.
- Knock out all three cameras and the back door opens: the Back Alley then leads into the Vault.
- Speed pays. Jobs pay full value for their first 30 seconds of play.

2 THE PLAYFIELD

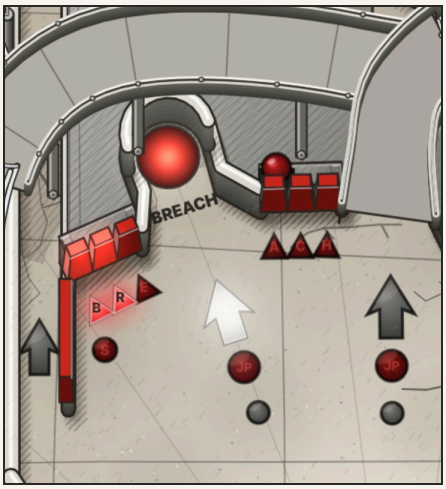

1. **BACK ALLEY** · the left orbit, up and over the top into the CAM lanes. Right flipper.
2. **BACK DOOR** · opens in the Back Alley's wall after CAMERAS DOWN, leading into the Vault.
3. **THE VAULT** · the upper playfield and its three tumbler targets.
4. **VAULT LANE** · the narrow lane up into the Vault. The hardest shot on the table.
5. **UPPER FLIPPERS** · the Vault's own pair, on the main buttons.
6. **THE IMPOUND** · a three-ball lock cage over the orbit.
7. **CAM LANES AND CAMERAS** · three top lanes, each watched by a camera.
8. **POP BUMPERS** · three, in their own nest. One exit, to the right inlane.
9. **SAFE** · a standup on the orbit's inner wall. Right flipper.
10. **THE BREACH** · the scoop. Starts every job. Right flipper.
11. **B-R-E-A-C-H** · six standups in two banks of three.
12. **BLACK MARKET RAMP** · the centre ramp. Either flipper.
13. **BLACK MARKET** · the shop at the top of the ramp.
14. **REACTOR DROP TARGETS** · three, across the Reactor's mouth.
15. **REACTOR CORE** · a captive ball behind the drops.
16. **VENT** · a standup on the Reactor's right flank. Left flipper.
17. **SKYWAY** · the right ramp, over to the left inlane. Left flipper.
18. **SPINNER** · in the Skyway's lane.
19. **BLACK MARKET MENU** · five lights: the item on offer.
20. **HEIST MAP** · the five jobs and Blackout, in the brain.
21. **BONUS MULTIPLIER** · 2X to 6X.
22. **R-A-G-E LANES** · the two outlanes and two inlanes.
23. **SLINGSHOTS**
24. **FLIPPERS**
25. **SHOOTER LANE** · the plunger. Every plunge goes to the CAM lanes.
26. **SHOOT AGAIN** · lit for a ball save or an extra ball.

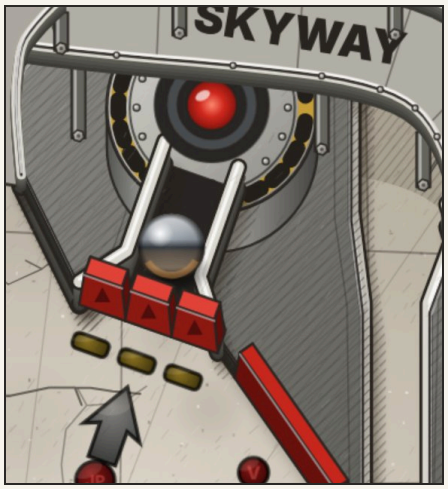

3 THE SHOTS

Five major shots drive the game, plus the vault lane. Every major shot pays its value, $5K cash and a twentieth of its value to the bonus, and feeds whatever job, multiball or RAGE is running.

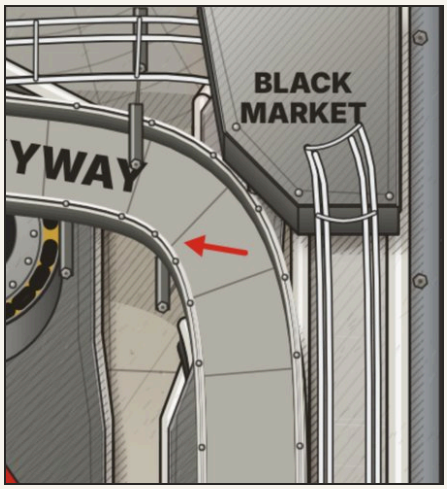

SHOT	FROM	VALUE	COMES BACK TO	WHAT IT DOES
SKYWAY	Left flipper	75K	Left inlane	Up the lane past the spinner, over the top and down the wire. Feeds the Impound when the lock is lit.
BLACK MARKET	Either flipper	100K	Right inlane	Buys the item on the menu if you have the cash. The skill shot.
BACK ALLEY	Right flipper	75K	CAM lanes, pops, right inlane	Round the orbit and over the top. With the back door open, into the Vault instead (still counts as the Back Alley).
THE BREACH	Right flipper	25K	Left flipper	Starts jobs. Collects a lit Breach jackpot or extra ball.
REACTOR CORE	Left flipper, drops down	100K + 50K × heat	Back to the flippers	The captive ball hits the core. Raises the heat, pays supers and starts Blackout.
VAULT LANE	Right flipper	50K	The Vault	The narrow lane into the upper playfield. The hardest shot on the table.

THE BREACH AND B-R-E-A-C-H

THE REACTOR

BLACK MARKET AND SKYWAY

◆ COMBOS

Make a major shot within 3.5 seconds of the last one for a combo. A 2-way combo pays 50K, a 3-way 100K, a 4-way 150K, and so on: 50K for every shot in the chain after the first two.

◆ THE BALL'S PATHS

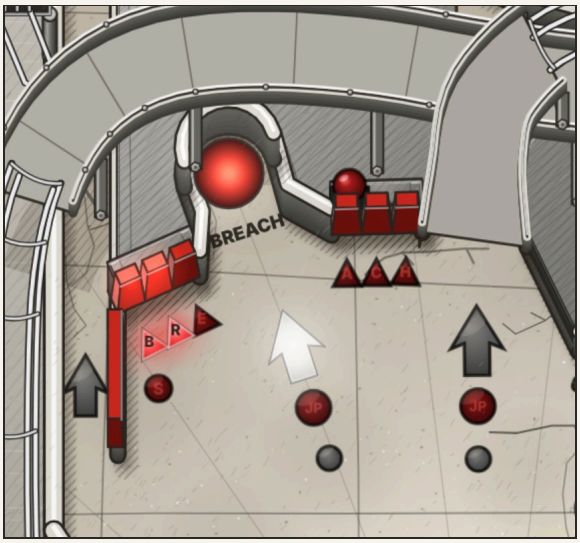

The ramps bring the ball back to an inlane, so you can catch it and go again. The pops and the Back Alley drop it into the right inlane. The Breach kicks it out to the left flipper, and the plunger always sends it into the CAM lanes.

4 FEATURES

B-R-E-A-C-H

Six red standups in two banks of three, either side of the Breach. A new letter pays 25K, and a letter that's already lit 5K. The two posts at the Breach's mouth count as E and A. Lit letters stay lit from ball to ball, and reset at the start of each game.

- **The first spelling of the game breaks in: BROKEN IN**, and Infiltrate lights at the Breach.
- **Every spelling after that lights a Breach jackpot:** 1M, plus 250K for each one you've already collected. Spell it twice before collecting and the two add up.
- **The third spelling of the game also lights an extra ball** at the Breach. One a game.
- Any shot into the Breach collects them. The Breach's JP light blinks while either is waiting.

B-R-E ON THE LEFT BANK, A-C-H ON THE RIGHT. THE RIGHT LIP FLARES WIDER, FOR THE RIGHT FLIPPER'S SHOTS.

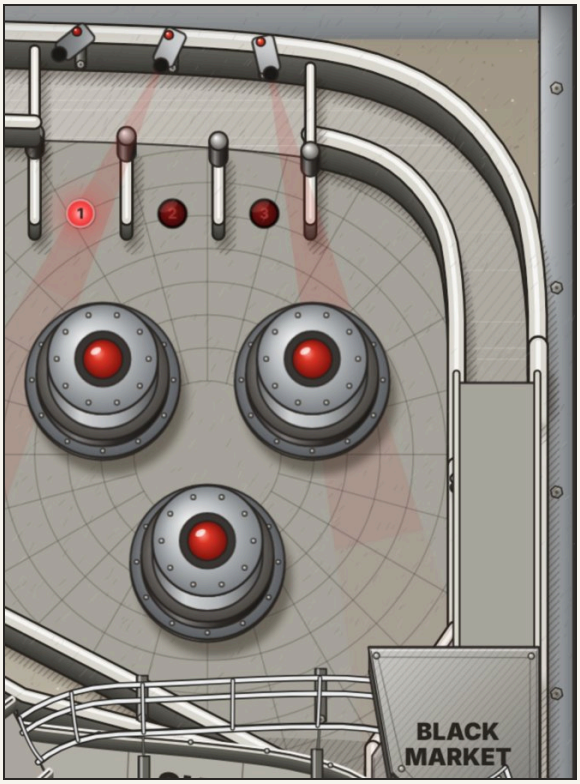

THE BREACH

The scoop holds the ball for a moment and kicks it out to the left flipper. When it starts a job it holds the ball while the display explains the job. When two jobs are lit, it holds the ball for 4 seconds while the flipper buttons choose between them, and starts whichever is showing.

CAM LANES AND THE CAMERAS

Three security cameras pan over the three CAM lanes at the top. Roll through a lane to light it (25K, or 5K if it's already lit) and knock out the camera above it. Every plunge and every Back Alley shot drops into the CAM lanes.

- **Lane change:** each flipper button shifts the lit lanes one place that way, round the end, together with the R-A-G-E letters.
- **All three lit: CAMERAS DOWN.** 100K and $25K. The back door opens for 20 seconds. The lanes blink for 6 seconds, then reset.
- **Once Infiltrate is finished,** CAMERAS DOWN also lights Hack or Route at the Breach.
- Lit lanes reset at the start of each ball.

CAM 1-3, THE CAMERAS AND THE POPS

THE BACK DOOR

A gate in the Back Alley's wall. While it's open, a Back Alley shot goes through it into the Vault. It still counts as the Back Alley shot, and the door shuts behind the ball. It stays open for the whole of vault multiball.

R-A-G-E AND RAGE

The four lanes at the bottom spell R-A-G-E: **R** the left outlane, **A** the left inlane, **G** the right inlane, **E** the right outlane. Each lane pays 5K, and lighting a letter 20K more. The flipper buttons shift the lit letters.

All four lit raises the bonus multiplier one step (up to 6X; it carries over between balls) and starts **RAGE**, or adds 10 seconds to it.

Finish R-A-G-E on an outlane and that ball is saved when it drains: **BALL SAVED · RAGE SAVED IT**. Finishing on an inlane doesn't save anything, because that ball isn't draining.

RAGE

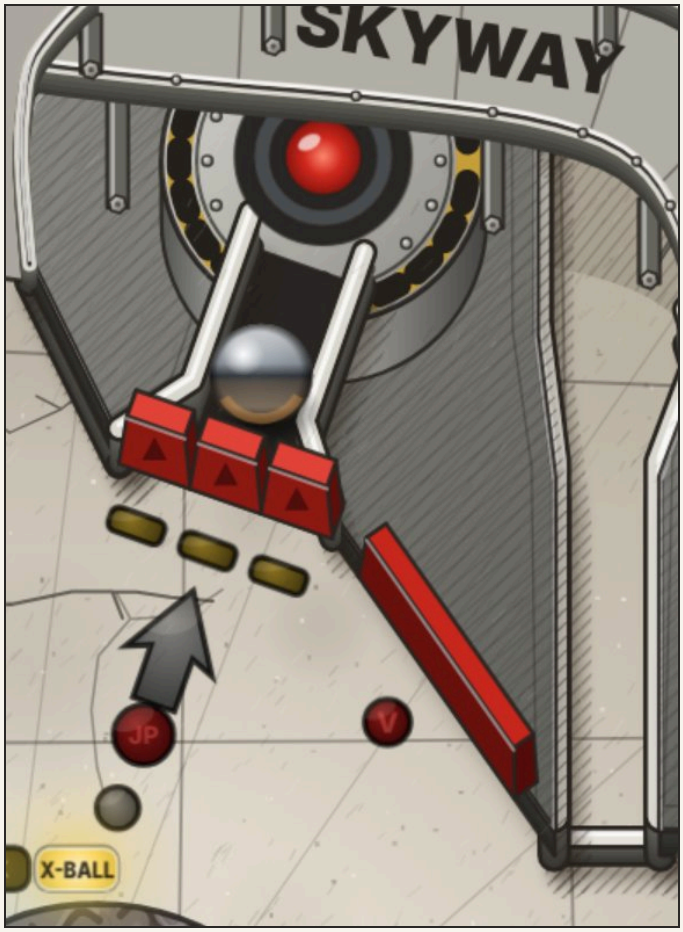

A 20-second frenzy that runs alongside anything else. Every switch pays 100K (pop bumpers 150K) and every major shot 250K. The spinner doesn't count. The clock waits while a ball is held, and at zero RAGE keeps scoring for a 2-second grace period. It ends when the ball drains. After a Blackout its values go up with the heist.

POPS, SLINGS, SPINNER, SAFE AND VENT

SWITCH	SCORE	CASH
Pop bumper	5,000	$2K
Slingshot	1,010	$1K
Spinner, a turn	2,500	$500
SAFE or VENT	25,000	$11K
CAM lane, R-A-G-E lane	5K–25K	$1K

A Skyway shot spins the spinner 8 to 15 times. The pops send the ball out of their nest to the right inlane.

THE REACTOR

Drop targets: 25K each. Knock all three down for 100K: the core is exposed and the lock lights at the Skyway, if a lock is possible. Drop 3 hides behind drop 2, so take drop 2 first.

Once Hack or Route is finished, knocking all three down also lights Payload or Extract at the Breach.

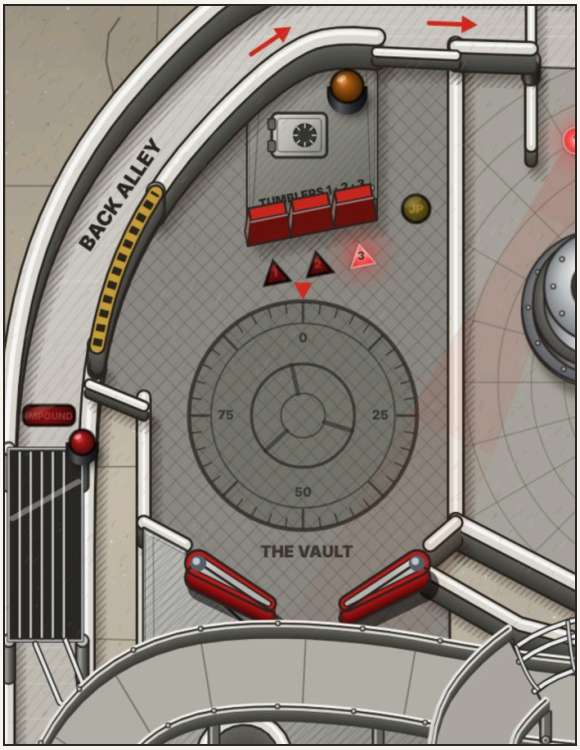

The core: with the drops down, shoot the captive ball into the core. Each hit raises the **reactor heat** for the rest of the game and pays 100K plus 50K for each level of heat (150K for the first hit). The drops come back up a moment later, unless a super jackpot wants them down.

The core is also where every super jackpot is collected, and where Blackout starts.

THE VAULT

The upper playfield at the top left, with its own pair of flippers on the main buttons and three **tumbler** targets. Get in up the vault lane or through the open back door (50K). Leave out the top into the CAM lanes (100K) or down the side to the right flipper.

- **The combination:** the display shows the code, for example **CODE 3-1-2**, and the next tumbler's light blinks. The code is random, and new after every crack.
- **Hit the tumblers in order:** the first pays 50K, the second 100K, and the third cracks the vault for 1M.
- **A wrong tumbler** pays 10K and starts the combination over. If it happens to be the code's first tumbler, it counts as the start.
- Progress carries over from ball to ball.
- **Cracked:** the hatch opens and up to three balls drop out for **vault multiball** (section 6). Cracking it during another multiball adds a ball.

THE VAULT: TUMBLERS 1-3 AT THE BACK, THE HATCH, THE UPPER FLIPPERS

THE IMPOUND

A three-ball lock in a cage over the orbit. With the lock lit (by the Reactor's drops, or bought at the Black Market), a Skyway shot is diverted up a wire into the cage. It still scores as a Skyway shot, and if it was your only ball, a new one is served to the plunger. Lock three for **Impound multiball**. Locked balls stay locked from ball to ball, but Payload and Blackout use them first, which empties the lock.

SKILL SHOT

Plunge, and make the Black Market ramp within 7 seconds: 500K and $50K. The Black Market's arrow strobes while it's live. Every ball served to the plunger gets one, including the ball served after a lock.

BALL SAVE

12 seconds from the plunge of each new ball, shown by the blinking **SHOOT AGAIN** light. Multiballs give 12 seconds (Blackout 20), and the Black Market sells 15. The ball save waits while a ball is held in the Breach or rolling into the Impound.

BONUS

Everything adds to the end-of-ball bonus:

- a twentieth of every major shot's value;
- a new B-R-E-A-C-H letter 1,500, a R-A-G-E letter 1,000, a drop 2,000, a pop 200;
- a twentieth of every job's total when it ends.

At the end of the ball the bonus is multiplied by the bonus multiplier (1X to 6X, raised by R-A-G-E) and added to your score. The multiplier carries over between balls.

EXTRA BALLS

Two a game at most: one lit at the Breach by the third B-R-E-A-C-H, and one bought at the Black Market. The **SHOOT AGAIN** light stays on while one is waiting. You play the same ball number again.

TILT

Nudging moves the ball but fills a tilt meter, which drains over a few seconds. The third quick nudge shows **DANGER**. The fifth tilts: the flippers die and the ball is lost with its bonus. A tilted ball scores nothing and starts nothing, and a job in progress ends unfinished, so its row lights again.

5 THE HEIST

The heist is the table's story: five jobs in three rows, drawn on the map in the brain at the centre of the playfield, ending in Blackout. Each row has a **key** that lights its jobs at the Breach. A row opens once you've finished a job in the row above.

KEY		
SPELL B-R-E-A-C-H	**INFILTRATE** Sneak past the cameras and get inside.	
FINISH IT ▼		
KEY CAMERAS DOWN	**HACK** Crack three keypad codes.	**ROUTE** Plot the escape: four shots in order, twice.
FINISH ONE ▼		
KEY ALL THREE REACTOR DROPS DOWN	**PAYLOAD** Two-ball multiball. Load the ramps, cash the super.	**EXTRACT** The getaway: three hurry-ups in order.
FINISH ONE ▼		
LIT AT THE REACTOR CORE	**BLACKOUT** The wizard mode. Every shot is a jackpot.	

HOW A JOB RUNS

- **Start:** shoot the Breach while a job is lit. Starting a job uses up its row's light, so the other job in that row needs the key again.
- **Choose:** if two jobs are lit, the flipper buttons choose while the ball waits in the Breach.
- **One at a time:** no job starts while another job, a multiball or Blackout is running. A key earned meanwhile lights its row for afterwards; the display says **AFTER THIS JOB**.
- **No clock:** a job lasts until you finish it.
- **Speed pays:** Infiltrate's, Hack's and Route's shots and finishing bonus pay full value for the first 30 seconds of play, then drain to half over two minutes. The display shows **SHOTS PAY 75%**, for example.

LOSING THE BALL

A job carries on with your next ball (**HACK CONTINUES**, for example), but the step you were in the middle of starts over: Hack's current code, Route's current lap, Extract's current leg. Infiltrate keeps the shots you've snuck past.

Multiballs don't carry over. If Payload's multiball ends before its super jackpot, the job fails and its row lights again. A tilt ends any job the same way.

FINISHING

A finished job shows its title and bonus, then its total, and adds a twentieth of the total to your bonus. Finishing a row-3 job lights **Blackout** at the Reactor. After Blackout the heist starts over, with Infiltrate lit and every job worth 0.5X more.

INFILTRATE

ROW 1 · KEY: B-R-E-A-C-H
SPEED PAYS

LIT SHOTS	Back Alley, Black Market, Skyway and Reactor core (knock the drops down to reach it).
THE CAMERA	One of the four is watched: its arrow strobes red. The camera moves every 3.5 seconds, jumps when you make a shot, and never watches the last shot left.
SCORING	Sneak past with an unwatched shot: 500K, then 650K, 800K and 950K (**SNUCK PAST**). Make the watched one and you're **SPOTTED**: no award, and every later shot pays 100K less.
FINISH	All four made: **NO ONE SAW YOU**. Shoot the Breach: **YOU ARE INSIDE**, 3M.
DRAIN	The shots you've snuck past stay made.

HACK

ROW 2 · KEY: CAMERAS DOWN
SPEED PAYS

LIT SHOTS	The six B-R-E-A-C-H standups become a keypad: one key flashes at a time, four keys to a code. The Breach is lit too.
SCORING	250K a key. A code pays 1.5M, then 3M, then 4.5M (**CODE 1 CRACKED**). Shooting the Breach brute-forces the whole current code.
FINISH	Three codes: **SYSTEM HACKED**, 3M.
DRAIN	The code in progress starts over; cracked codes stay cracked.

ROUTE

ROW 2 · KEY: CAMERAS DOWN
SPEED PAYS

LIT SHOTS	Only the next stop on the route, in order: Skyway, Back Alley, Black Market, Reactor core. Twice.
SCORING	First lap 600K, 1.2M, 1.8M, 2.4M, then **ROUTE PLOTTED** +2.5M. Second lap 500K more a step: 1.1M, 1.7M, 2.3M, 2.9M. Out-of-order shots score nothing for the job.
FINISH	Two laps: **ESCAPE ROUTE SET**, 3M. A full-speed Route is worth 19.5M.
DRAIN	The lap in progress starts over.

INFILTRATE: THE CAMERA SAW YOU

HACK'S SCREEN

READING THE JOB SCREEN

While a job runs, the display shows its name at the top left, your score in the middle, and the job's status on the bottom line (**CODE 2 OF 3 KEY 1/4**, **NEXT SKYWAY**, **SNEAK PAST 2 MORE**). The bottom line takes turns with RAGE, the job's pace and any other multiball every 2 seconds.

PAYLOAD

ROW 3 · KEY: REACTOR DROPS
2-BALL MULTIBALL

START	A second ball joins (from the Impound if one is waiting), with a 12-second ball save.
LIT SHOTS	Both ramps are jackpots: 1.5M, plus 250K for each one.
SUPER	Three jackpots light the super jackpot at the Reactor for 20 seconds, and the drops fall out of the way. It pays three times the jackpot's value. Miss it and two more jackpots relight it.
FINISH	Collect the super jackpot. The job ends when its multiball does: finished if you collected a super, failed if not (its row lights again).

EXTRACT

ROW 3 · KEY: REACTOR DROPS
THREE HURRY-UPS

LIT SHOTS	One leg at a time, in order: Skyway, Black Market, Breach.
SCORING	Each leg is a hurry-up. It starts at 6M (then 7M, then 8M) and bleeds 200K a second down to 1.5M. Make the leg to bank its current value (**KEEP MOVING**).
FINISH	The third leg: **EXTRACTED**, 4M.
DRAIN	Finished legs stay finished; the leg in progress starts again at full value.

BLACKOUT

WIZARD MODE
3-BALL MULTIBALL

LIT	By finishing Payload or Extract. The Reactor's arrow lights red and its eye pulses.
START	Hit the core while no job or multiball is running. The lights die and it's a 3-ball multiball, with a 20-second ball save. Finish all five jobs first and it's **TOTAL BLACKOUT**, with a fourth ball.
JACKPOTS	The Skyway, Black Market, Back Alley and Breach are each a jackpot once: 2M, plus 500K for each.
SUPER	All four light the super at the Reactor (the drops fall): five times the jackpot's value. Then the four light again.
WORTH	Every job finished on this pass through the heist adds 0.5X to everything in Blackout.
END	With its multiball: **LIGHTS OUT** and your total. The heist starts over with Infiltrate lit, and the jobs, RAGE and Blackout are worth 0.5X more. A tilt ends Blackout without the step up.

BLACKOUT BEGINS

LATER SPELLINGS OF B-R-E-A-C-H

GOING FOR TOTAL BLACKOUT

Once Blackout is lit, any core hit with no job running starts it. The key to the last row is knocking the Reactor's drops down, which also exposes the core. To finish all five jobs first, knock the drops down and get to the Breach without touching the captive ball.

6 MULTIBALL

MULTIBALL	STARTED BY	BALLS	JACKPOTS	SUPER JACKPOT
IMPOUND	Locking three balls	3	Skyway, Black Market, Back Alley, Breach: 1M, +250K each	Four jackpots light it at the Reactor for 20 s: 3× the jackpot
VAULT	Cracking the vault	up to 4	Every ball out the Vault's top: 1M, +250K each	—
PAYLOAD	The Payload job	2	Both ramps: 1.5M, +250K each	Three jackpots light it for 20 s: 3× the jackpot
BLACKOUT	The core, once lit	3 or 4	Skyway, Black Market, Back Alley, Breach, once each: 2M, +500K each	All four light it: 5× the jackpot

IMPOUND MULTIBALL

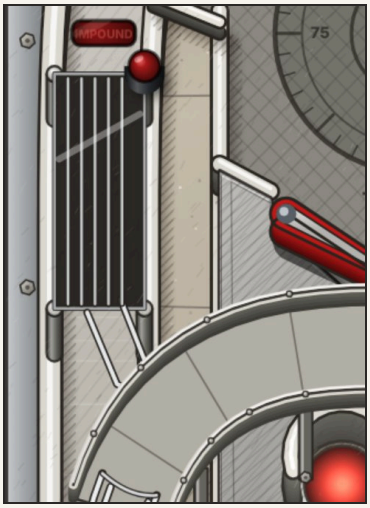

The cage lets the balls out one by one, down the Skyway's wire to the left flipper, with a 12-second ball save. Any of the four shots is a jackpot, as often as you make it. The jackpot's value carries on into your next Impound multiball. Four jackpots light the super at the Reactor and drop the targets out of the way. Miss the super and two more jackpots relight it. When the multiball ends, the display shows what it paid.

THE THIRD LOCK

THE VAULT, CRACKED

THE IMPOUND

VAULT MULTIBALL

Crack the vault's combination and the hatch opens: up to three balls drop onto the Vault's deck, for four on the table at most. 12-second ball save. The back door stays open for the whole multiball, so every Back Alley shot feeds the Vault. Each ball you send out the Vault's top pays the vault jackpot, which starts at 1M each time.

BALL SAVE IN MULTIBALL

Every multiball starts with a ball save (Blackout 20 seconds, the others 12). A drained ball is fired straight back in while it runs.

THE END OF A MULTIBALL

A multiball ends when one ball is left. Payload ends its job with it, and Blackout its pass through the heist.

> No new job starts during any multiball, and nothing can be locked. Keys you earn wait for afterwards.

7 THE BLACK MARKET

Everything you hit earns cash. Spend it at the Black Market: the box at the top of the centre ramp. Cash lasts the whole game; the display shows it on the bottom right when nothing else is lit.

EARNING CASH

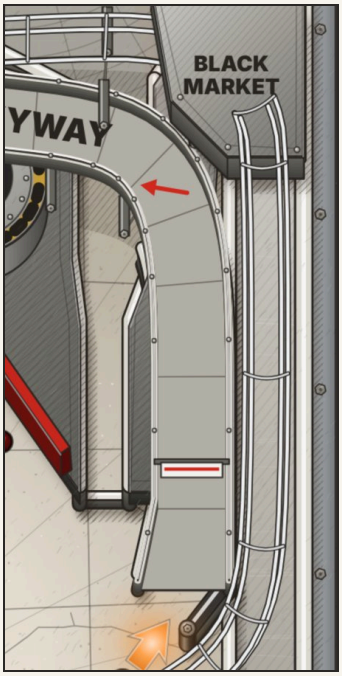

SOURCE	CASH
Any switch	$1K
Pop bumper	$2K
Spinner, a turn	$500
Major shot	$5K
SAFE or VENT	$11K
CAMERAS DOWN	$25K
Skill shot	$50K

BUYING

The menu under the Black Market's five lights rotates every 4 seconds through the items you can buy right now. The item on offer blinks, and blinks faster when you can afford it. Make the Black Market ramp to buy it. If you can't afford it, the display shows its price.

THE MENU

ITEM	PRICE	WHAT IT DOES
RAGE	$60K	Starts RAGE, or adds 10 seconds to it. Doesn't raise the bonus multiplier.
SAVE	$50K	A 15-second ball save. Offered while no ball save is running.
LOCK	$40K	Lights the lock. Offered when a lock is possible.
X-BALL	$200K	An extra ball. Once a game.
10X	—	On the menu, but not sold in this version.

THE BLACK MARKET, OVER THE SHOOTER LANE

8 SCORING

SWITCHES AND TARGETS

Slingshot	1,010
Spinner, a turn	2,500
Pop bumper	5,000
B-R-E-A-C-H letter: new / already lit	25K / 5K
R-A-G-E lane: lighting a letter / other	25K / 5K
CAM lane: lighting / other	25K / 5K
SAFE, VENT	25K
Drop target / all three	25K / +100K
CAMERAS DOWN	100K
Tumbler 1st / 2nd / crack	50K / 100K / 1M
Wrong tumbler	10K

SHOTS

Breach	25K
Skyway, Back Alley	75K
Black Market	100K
Reactor core	100K + 50K × heat
Into the Vault / out the top	50K / 100K
Combo, n-way	(n − 1) × 50K
Skill shot	500K
Breach jackpot	1M, +250K each

JOBS

Infiltrate shots / finish	0.5–0.95M / 3M
Hack keys / codes / finish	250K / 1.5–4.5M / 3M
Route steps / lap / finish	0.6–2.9M / 2.5M / 3M
Payload jackpot / super	1.5M +250K / 3×
Extract legs / finish	6M, 7M, 8M draining / 4M

MULTIBALL AND RAGE

Impound jackpot / super	1M +250K / 3×
Vault jackpot	1M +250K
Blackout jackpot / super	2M +500K / 5×
RAGE: switch / pop / shot	100K / 150K / 250K

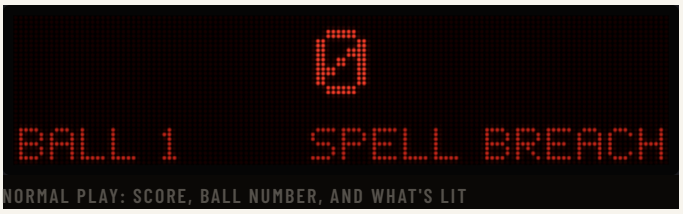

MULTIPLIERS

- **The heist level:** each Blackout makes the jobs, RAGE and Blackout worth 0.5X more for the rest of the game.
- **Blackout** is also worth 0.5X more for every job finished on that pass.
- **Speed pays:** Infiltrate, Hack and Route pay full value for 30 seconds of play, then drain to half over two minutes.
- **Bonus** is multiplied by 1X to 6X at the end of each ball.

WHAT A GAME IS WORTH

A first game is worth 1 to 3 million. Play a couple of jobs and a multiball and you'll reach 10 to 20 million. A Blackout game goes past 50 million.

9 THE DISPLAY

NORMAL PLAY: SCORE, BALL NUMBER, AND WHAT'S LIT

A JOB RUNNING: NAME, SCORE, ITS STATUS

THE FIRST B-R-E-A-C-H

TWO JOBS LIT: THE FLIPPERS CHOOSE

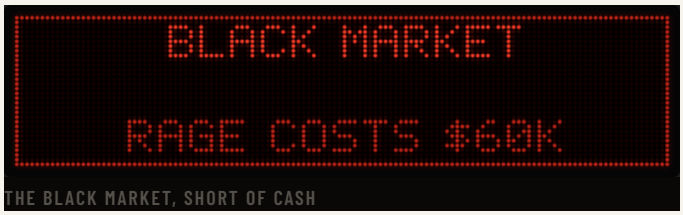

ALL THREE CAM LANES LIT

ALL THREE DROPS DOWN

ENTERING THE VAULT: THE CODE

THE BLACK MARKET, SHORT OF CASH

THE STATUS LINE

In normal play the bottom right shows the most important thing that's lit, in this order:

VAULT 1.25M · JP 1.5M · SUPER 12	A multiball's jackpot, or the seconds left on its super
BLACKOUT LIT	Hit the core
CODE 3-1-2	A ball is in the Vault: the combination
EXTRA BALL LIT	Collect it at the Breach
BREACH LIT	A job is ready to start
BREACH JP 1M	A Breach jackpot is waiting
LOCK LIT	Shoot the Skyway to lock a ball
SAVE	The ball save is running
SPELL BREACH	You haven't broken in yet
$45K	Your cash

While a ball waits in the shooter lane the bottom line blinks LAUNCH instead.

10 STRATEGY

These odds are measured, not guessed. The game's physics was run off each flipper at every flip timing 2 ms apart, from a cradled ball and from a ball rolling straight off the inlane. Each figure is the share of those timings that makes the shot. A bigger number means a wider timing window.

SHOT ODDS, LEFT FLIPPER

SHOT	CRADLED	ON THE MOVE
SKYWAY	19%	2%
BLACK MARKET	9%	16%
REACTOR CORE (DROPS DOWN)	10%	10%
DROP 1 / DROP 2	13% / 12%	11% / 12%
DROP 3 (ONCE 2 IS DOWN)		11%
VENT	13%	5%
LETTERS H / C / A	0%	5% / 10% / 10%
THE BREACH	0%	3%

SHOT ODDS, RIGHT FLIPPER

SHOT	CRADLED	ON THE MOVE
BLACK MARKET	12%	4%
BACK ALLEY	10%	4%
THE BREACH	9%	13%
VAULT LANE	1%	0%
LETTERS H / A	15% / 9%	11% / 11%
LETTER B	6%	0%
SAFE	7%	2%

The Skyway can't be made from the right flipper, and the Back Alley can't be made from the left. The Breach is a right-flipper shot; the left flipper only finds it on the move, rarely.

THE BREACH

The Breach starts every job. It's a right-flipper shot: 9% of cradled timings make it, and 13% of balls rolling off the right inlane. The Black Market ramp returns to the right inlane, so **Black Market, then the Breach on the fly** is the natural way in.

BREAKING IN

From a cradle on the right flipper, **H** (15%), **A** (9%) and **B** (6%) are the aimable letters. **C** is a left-flipper shot on the move (10%): make the Skyway, then flip at C as the ball comes off the left inlane. **R** and **E** mostly come from rebounds. Letters you've lit stay lit for the whole game, so keep chipping away.

FLOW

- The Skyway comes back to the left inlane: from a cradle on the left flipper you can shoot it again and again.
- The Black Market comes back to the right inlane.
- The Breach kicks out to the left flipper.
- The pops and a closed Back Alley feed the right inlane.

DANGER ZONE: THE RIGHT OUTLANE

In simulated play the right outlane drains about three balls for every one down the left. The worst feeders are the Reactor's drop targets: a drop hit from the left flipper rebounds into the right outlane a quarter to a third of the time. The left slingshot and SAFE send the ball that way too. Shoot the drops from a cradle, aim for the middle of the bank, and be ready to nudge.

THE VAULT

The vault lane is the hardest shot on the table. The easy way in is the back door: light all three CAM lanes, then make the Back Alley within 20 seconds. Inside, the upper **left** flipper reaches tumblers 1 and 3, and the upper **right** flipper reaches tumbler 2. The upper right flipper also sends most balls out of the Vault's side drain, so only use it when the code asks for tumbler 2.

11 APRON CARDS

The two cards that sit either side of the flippers on a cabinet's apron: how to play on the left, scores on the right. Cut along the dashed lines.

CYBER PSYCHOSIS

THE HEIST

1. Spell **B-R-E-A-C-H** to break in. Shoot the **Breach** to start **Infiltrate**.
2. **Cameras down** (light CAM 1-2-3) lights **Hack** or **Route**.
3. Knock down the **Reactor** drops to light **Payload** or **Extract**.
4. Finish Payload or Extract to light **Blackout**. Hit the Reactor core.

Jobs have no clock, and carry on if you lose the ball.

MULTIBALL

- **Impound:** the Reactor drops light the lock. Shoot the Skyway. Lock 3.
- **Vault:** cameras down opens the back door. Shoot the Back Alley, then hit the tumblers in the order on the display.

AND

- **R-A-G-E** raises the bonus X and starts RAGE. Finish it on an outlane to save that ball.
- Flipper buttons move the lit lanes.
- Cash buys the **Black Market** menu: make the centre ramp.
- **Extra ball:** the 3rd B-R-E-A-C-H, or the Black Market.

3 BALLS · BALL SAVE 12 S · SQUIDZOMBIE PINBALL

SCORE CARD

JACKPOTS

Breach jackpot	1M +250K
Impound	1M +250K
Vault	1M +250K
Payload	1.5M +250K
Blackout	2M +500K
Supers	3× · Blackout 5×

JOBS FINISHED

Infiltrate · Hack · Route	3M
Extract	4M
Each Blackout	+0.5X

3 _____	_____
4 _____	_____

SECTOR 9 · ONE HEIST · NO GHOSTS

12 OPERATOR'S SECTION

SETTINGS

SETTING	HOW	KEPT
Game speed: 100%, 90% or 80%	The % button	On this device
Flat or tilted view	V, or ?flat in the address	No
Sound on or off	Speaker button, or M	No
Pause	P	—
High score	Set by play	On this device

A slower game speed slows the whole game, ball and timers alike, which helps on a small screen.

FIXED ADJUSTMENTS

Balls per game	3
Ball save, from the plunge of each new ball	12 s
Tilt warning (DANGER)	3rd quick nudge
Tilt	5th quick nudge
Tilt meter recovery	1 nudge per 2.5 s
Nudge repeat	one per 0.6 s
Balls in play, most	4

SPECIFICATIONS

Playfield	600 × 1200 units; 1 unit is about 1 mm
Ball	28 units across
Physics	480 steps a second, fixed; ramps on their own collision layers; flippers pass their real surface speed to the ball
Picture	3/4 view with real height, tilted in 3D; lamps, flashers and general illumination drawn live
Display	128 × 32 dot matrix
Flashing	No large area of the screen flashes more than three times a second
Art and sound	All generated in code; no image or sound files

SWITCH LIST

SWITCH	WHERE
FLIPPER BUTTONS	Left and right; each works both flippers on its side
PLUNGER	Shooter lane
TILT	Nudge
SLINGSHOTS	Left, right
POP BUMPERS 1-3	Top right nest
CAM LANES 1-3	Top lanes, above the pops
R-A-G-E LANES	R left outlane, A left inlane, G right inlane, E right outlane
B-R-E-A-C-H	Six standups. The posts at the Breach's mouth also count as E and A
SAFE	Orbit's inner wall
VENT	Reactor's right flank
DROP TARGETS 1-3	Across the Reactor's mouth
REACTOR CORE	Captive ball hits the core
BREACH SCOOP	Holds and ejects the ball
SKYWAY MADE	Top of the Skyway
SPINNER	Skyway lane
BLACK MARKET MADE	Top of the centre ramp
BACK ALLEY	Top of the left orbit
VAULT ENTRY	Top of the vault lane, and the back door
TUMBLERS 1-3	In the Vault
VAULT EXITS	Out the top, or down the side drain
IMPOUND LOCK	The cage, fed from the Skyway
DRAIN	Below the flippers

MOVING PARTS

Breach kicker · back door · Back Alley loop diverter · Skyway lock diverter · Impound release · Vault hatch · drop target reset · auto-launcher for multiball and saved balls.

LAMP LIST (66 INSERTS)

LAMPS	COUNT	MEANING
SHOT ARROWS	5	Skyway, Black Market, Back Alley, Breach, Reactor: something to collect there. Slow blink: available. Fast: a jackpot or a hurry. Strobe: a super, or the watched shot in Infiltrate
SHOT JACKPOTS (JP)	5	A jackpot is lit at that shot
SHOT MODE LIGHTS	5	The running job wants this shot, in the job's colour
LOCK	2	LOCK at the Skyway; IMPOUND on the cage
SAFE, VENT	2	Flash when hit
B-R-E-A-C-H	6	On: spelled. Flashing: Hack's key to hit
CAM 1-3	3	On: camera knocked out. Blinking: CAMERAS DOWN
TUMBLERS 1-3	3	Blinking: the next tumbler in the code
VAULT JACKPOT, VAULT ARROW	2	JP: vault multiball's jackpot. Arrow: lit while the back door is open
DROP TARGETS	3	On: that drop is down
BLACK MARKET MENU	5	RAGE, SAVE, LOCK, 10X, X-BALL. Blinking: on offer. Faster: you can afford it
HEIST MAP	15	Six plaques with five domes: lit when a job is ready, fast while it runs, steady once done. Four junction lights: how far into the heist you are; all blink while Blackout is lit
BONUS 2X-6X	5	The bonus multiplier
R-A-G-E	4	Letters lit; in RAGE the unlit ones blink
SHOOT AGAIN	1	Slow: ball save. Fast: save ending. On: extra ball

FLASHERS (5)

Impound cage beacon · Black Market · A-C-H bank · Reactor eye · Vault tumbler block.

DIAGNOSTICS

The game ships with its own test suite. From the source folder:

COMMAND	WHAT IT CHECKS
NPM TEST	Every rule: the heist, its keys, each job, the multiballs, the Black Market, RAGE and its clock, ball flow, flash safety
NPM RUN SIM	A bot plays for ten minutes; checks that no ball escapes, sticks or passes through a wall
NPM RUN MEASURE	Shot windows, ramp returns, the Back Alley, the plunge, the pops, the Breach, the Vault and every clearance. Name one section, for example **NPM RUN MEASURE WINDOWS**
NPM RUN TEMPLATE	Redraws the art templates from the physics
NPM RUN BUILD	Builds the game for the web

INSTALLING

- **Phone:** open the game in Safari, then Share, Add to Home Screen. It opens full screen like an app.
- **Website:** **NPM RUN BUILD** makes a folder of static files that runs from any web folder.
- **App store:** the same build can be wrapped as a native app with Capacitor.

CLEARANCES

Every gap the ball must pass is measured against the ball. The tightest are the pop bumper exit lane and gate (1.07 balls) and the vault lane (1.12 balls). The Breach's mouth is 2.21 balls wide, its right lip flared for the right flipper's cradled shots, and the Black Market's 1.89.

SOFTWARE VERSION 20

This manual describes version 20 of Cyber Psychosis, October 2026: the heist map with its three keys, B-R-E-A-C-H rewards, untimed jobs that survive a drain, the Vault's random combination, the brain under the heist map, and the fixes and flared Breach from the October audit.

Cyber PSYCHOSIS

Break in. Hack the keypad. Plot the route. Load the payload. Make the getaway. Then overload the reactor and black out the grid.
